

ATM switching and clearing services on the Trionis Network

- Enabling acquirers, merchant acquiring networks and Independent ATM Deployers to send ATM and manual cash transactions to International Card Schemes
- Support for both single message and dual message systems
- Value added services such as balance enquiry, PIN change and unblock
- Enhanced revenue possibilities through dynamic currency conversion, flexible access fees and vouchers

The Trionis ATM switching and clearing service enables acquiring partners to process ATM and manual cash transactions via a single connection to all the major international card schemes, as well as between a growing yet selective roster of domestic schemes.

Trionis is one of the only networks offering the flexibility to use either single or dual message formats. The use of single message formats enables customers to benefit from initiating and concluding a transaction within a single message cycle.

Bilateral agreement processing can also be facilitated between domestic schemes using a variety of messaging formats, including the Trionis protocol, Berlin Group, Base24 and other formats, with the advantage that a client does not need to connect to all the individual participants.

Our ATM switching services currently provide connections to:

- American Express
- UnionPay International
- Diners Club & Discover
- JCB International
- MasterCard
- Visa

A Unique Combination of Choice & Flexibility

Trionis offers the freedom to choose the level of acceptance to suit business needs with the flexibility to respect individual scheme ATM, service and locally applied acquirer and cardholder fees.

For more information on how Trionis can help your organisation achieve benefits using Trionis switching services please contact us at:
