

Retail Payments switching services on the Trionis Network

- Enables acquirers to accept a wide range of retail payments schemes
- Support for both single message and dual message systems
- Single gateway approach protects acquirers against multiple implementations and costly compliance projects
- Enhanced revenue possibilities through dynamic currency conversion and vouchers

The Trionis Retail Payments switching service enables acquiring partners to accept in-store, and online payments for a variety of card and non-card products.

Trionis is one of the only networks offering the flexibility to use either single or dual message formats. The use of single message formats enables customers to benefit from initiating and concluding a transaction within a single message cycle.

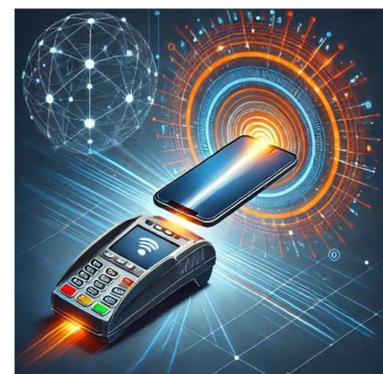

Retail payments can be exchanged in a variety of messaging formats including Trionis and Berlin Group formats, with the advantage that a client does not need to connect to all the individual participants.

Our Retail Payments switching services can provide connections to:

- UnionPay International
- JCB International
- American Express
- Diner's Club & Discover
- MasterCard
- Visa

A Unique Combination of Choice & Flexibility

Trionis offers the freedom to choose the level of acceptance to suit business needs with the flexibility to respect individual scheme interchange, service and locally applied acquirer and cardholder fees.

For more information on how Trionis can help your organisation achieve benefits using Trionis switching services please contact us at:
